

**Amendments to the Specification:**

Please replace paragraph [0043] with the following amended paragraph:

[0043] In step B06, the study process server 60 continues to monitor activity at the review stations 20. In step B08, if a review station 20 informs the study process server 60 that a study has been completed, the study process server 60 informs other review stations 20 that the study has been completed in step B10 so that the other review stations 20 may delete the completed study in order to create space for additional studies. Furthermore, the study process server 60 may monitor the review stations 20 for a low buffer threshold in step B12. If a number of studies has been completed and deleted, the study process server 60 may re-populate the review station 20 in step B14.
